

AI Resume Analysis Report

ATS Score: 35/100

Udaya is a technically capable Computer Science undergraduate with solid programming skills in Python, SQL, and full-stack web development. While the resume showcases strong analytical thinking, teamwork, and communication, it falls short of the data-centric and product-focused requirements of the LSEG Graduate Programme. Key gaps include lack of demonstrated data-analytics/AI experience, no exposure to financial markets, and missing product-management language. Enhancing the resume with data-analysis projects, finance-related coursework, and explicit product-oriented achievements, while weaving in JD keywords, would markedly improve ATS relevance and overall fit for the role.

Matched Skills

- Python
- SQL
- Analytical problem solving
- Communication
- Collaboration
- Teamwork
- Object-Oriented Programming
- Data Structures & Algorithms

Missing Skills

- Data Analytics
- Data Science
- Artificial Intelligence / Machine Learning
- Business Intelligence
- Product Management
- Product-led mindset
- Customer empathy / customer perspective
- Financial markets knowledge
- Asset classes / corporate finance
- SQL querying for multi-table datasets
- Python for data analysis (pandas, numpy, etc.)
- Data visualization tools (e.g., Tableau, PowerBI)
- Strategic thinking
- Adaptability and resilience in fast-paced environments

Strengths

- Solid foundation in Python and SQL programming languages.
- Full-stack development experience with React, Node.js, and MongoDB.
- Proven ability to work in a team environment and deliver project outcomes (IBM Hackathon 3rd place).

- Strong analytical mindset and attention to detail, reflected in problem-solving approach.
- Effective verbal and written communication demonstrated through presentations and documentation.

Weaknesses

- Limited exposure to data analytics, AI/ML, or business intelligence tools and methodologies.
- No explicit experience or knowledge of financial markets, asset classes, or corporate finance.
- Absence of product management or product-led experience and related terminology.
- SQL experience is listed but not contextualized for analytical querying or reporting.
- Resume lacks quantifiable achievements (e.g., performance metrics, impact numbers).

Recommendations

- Add any coursework, projects or certifications related to data analysis, AI/ML, or business intelligence (e.g., pandas, scikit-learn, Tableau).
- Highlight any experience using SQL for data extraction, filtering, aggregation, or reporting.
- Demonstrate interest in financial markets – include relevant modules, self-studies, or finance-related projects.
- Emphasize product-oriented thinking: describe how you gathered user requirements, prioritized features, or iterated on product design in your projects.
- Include keywords from the JD such as "product management", "customer focus", "data analytics", "AI", "business intelligence", and "financial markets" where appropriate.
- If you have participated in hackathons or extracurricular activities that involved data-driven solutions, add those details.
- Consider adding a brief "Relevant Coursework" section (e.g., Data Mining, Statistics, Financial Engineering).
